Figure 2: Item 1630, Door gate closed

Durable, safe, and quiet.

Over thirty five years of incremental design improvements have resulted in the refined and polished Standard Box stall of today.; a simple design perfectly executed. The quality and condition of your stabling environment will affect the health and performance of your horse. Surround your horse with, 'The Standard' your horse desires and deserves.

- A solid welded frame ensures your stalls set up quickly and easily with minimum labor costs
- A solid welded frame provides superior strength and rigidity for years of safe reliable service
- Heavy walled 1.9"OD, 14 gauge high tensile steel tubing frame construction for exceptional durability.
- The four foot door roles smoothly and silently on custom contoured 4" nylon wheels
- The door includes a large drop-down window to provide your horse with a more stimulating view of the barn
- All our box stalls use a common connector system so you can easily integrate various stall fronts and partitions
- The precision connector system creates a more rigid stall system which is safer, quieter, and more durable
- The stall front includes a corner feed gate for quick access to the stall from the safety of your alley
- Two sets of clip rings can be found inside the stall for hanging feed and water (by the feed gate & mid stall)
- The fronts are finished with a durable and handsome hunter green, semi-gloss, powder coat finish
- The upper grills are made with 1"OD vertical bars set safely on 4" centers (maximum 3" opening)
- The lower panels include integrated channels designed to accept 2x6 planed lumber (lumber not included)
- Lumber installation is easy, simply slide your lumber into the channels and screw the last piece in place
- Integrated steel channels protect wood edges from chewing horses
- Optional hay racks, corner feeders, and blanket hangers are available
- Frames are 7' high (7'-4" including nylon door wheels)

For assistance with your plans call our designers and they can prepare complimentary design drawings for your facilities. Our courteous designers will quickly guide you through the design stage. With their wealth of design experience they know what questions to ask to get the best solution for your barn. After a few clarifying questions they will develop a scaled and dimensioned drawing for your review. Each required item will be clearly identified, and a corresponding product list will be provided.

Custom sizes are available. The panel portion of the frame will be adjusted in 4" increments. Any finer adjustments will be made up with a reduction of the door opening (less than 4"). The door and track however will remain unchanged. A 25% mark-up will be added for this service.
